OBJECTIVE

Senior Flutter Developer with 3 years and 6 months of experience building scalable cross-platform applications for Android, iOS, and Web using Flutter. Skilled in clean architecture, performance optimization, and delivering high-quality, user-centric mobile solutions.

WORK EXPERIENCE

Insasoft Technologies, *Senior Mobile App Developer*

09/2025 – Present

Led development of **enterprise-grade cross-platform Flutter applications** across **Android, iOS, and Web**, implementing **Clean Architecture**, structured **Chopper-based networking layers**, and scalable multi-role system design.

Drove architectural standardization, real-time system integration, and production-ready deployment practices across multiple enterprise solutions.

Key Projects

Hub Business Center – Floor & Tenant Management System

- Architected a multi-role workspace management platform with dynamic dashboards and floor/seat allocation workflows.
- Designed structured API layers using **Chopper (REST client)** with repository-based architecture.
- Integrated **Ably real-time messaging** and **Firebase Cloud Messaging (FCM)** for live system updates.

HireME – Worker Hiring & On-Demand Platform

- Developed a real-time hiring ecosystem supporting Admin, Employer, and Worker modules.
- Implemented secure authentication, booking lifecycle management, and payment workflows.
- Enabled real-time updates using **Pusher integration**.

And Trading – Salon Management System

- Built appointment scheduling, billing, and staff management modules with optimized backend communication via **Chopper-based API services**.

Smart Attendance System – Face, QR & Geo Validation

- Engineered a secure attendance system integrating **facial recognition, QR validation, and geolocation boundary enforcement**.
- Implemented offline-first persistence with structured synchronization mechanisms.

Core Contributions

- Designed reusable **API service layers using Chopper**.
- Implemented scalable multi-role system architectures.
- Managed production builds and release cycles.

CodeScribo Technologies, *Flutter Developer Consultant (Freelance)*

05/2025 – 10/2025

- Delivered **scalable commerce and operational Flutter platforms** using **modular architecture, Riverpod/Bloc state management**, and performance-optimized application structures. Focused on enhancing maintainability, improving application stability, and refining API-driven workflows for long-term scalability

Key Projects

Mr Coach Pro – Fitness & Coaching Platform

- Implemented **Bloc-based state management** and Firebase messaging.
- Managed Google Play Store release process.

Flutter E-Commerce App – Shopify Storefront Integration

- Developed scalable e-commerce architecture using **Riverpod, MVVM, and GraphQL (Shopify Storefront API)**.
- Structured modular navigation and product workflows.

Observation & Task Management System

- Strengthened an offline-first data platform using **Bloc/Cubit, Drift, and Sembast** with clean repository architecture.

Core Contributions

- Refactored networking and state layers for improved performance.
- Reduced technical debt through modular restructuring.
- Strengthened API architecture with centralized error handling and request interception.

- Engineered **real-time tracking and multi-role mobile systems** using **Dio-based API architecture**, secure authentication flows, and scalable Flutter application design across mobile and web platforms. Led implementation of hardware-integrated features, live monitoring systems, and secure transactional workflows in production environments.

Key Projects

School Bus Management & Tracking System

- Developed Parent and Staff applications with **GPS live tracking** and **RFID (Telpo device) integration**.
- Implemented backend communication using **Dio HTTP client** with interceptor-based request handling.
- Integrated Firebase notifications for real-time safety alerts.

Multi-Faceted E-Commerce Platform (User / Driver / Store Apps)

- Built three role-based applications with **Stripe payment integration**, OTP authentication, and real-time order updates.
- Designed API layers using **Dio with centralized error handling and token refresh mechanisms**.

Bookezy – Service Booking Application

- Implemented REST-based scheduling flows using **Dio networking architecture**.

ShopLite – E-Commerce Web Application (React)

- Developed a responsive web platform using **React, Redux, REST APIs**, deployed via AWS S3.

Core Contributions

- Implemented scalable **Dio-based networking layers** with interceptors and error handling.
- Delivered real-time tracking and secure authentication systems.
- Contributed to sprint planning and technical estimations.

EDUCATION

B.TECH - Informtion Technology, School of engineering, Cusat

SKILLS

Technical Skills : **Flutter, Dart, FlutterFlow** | **State Management**: Riverpod, Bloc, GetX, Redux | **Architecture**: Clean Architecture, MVVM, MVC | **APIs**: REST, GraphQL | **Firebase**: Auth, Firestore, Realtime DB, FCM, App Distribution | **Payments & Auth**: Stripe, RazorPay, Google Sign-In, OTP | **App Releases**: Google Play Store, Apple App Store (TestFlight) | **Tools**: Git, GitHub, Jira | **Web/Build**: Vite | **Cloud & Maps**: AWS S3, OpenStreetMap | **Device Integration**: Telpo | **Testing**: Unit, UI Testing

Soft Skills : **Communication & Collaboration**: Communication, Teamwork, Collaboration **Analytical Skills**: Problem-Solving, Critical Thinking, Decision Making **Leadership & Ownership**: Leadership, Self-Motivation **Work Ethic & Efficiency**: Time Management, Adaptability

OPEN SOURCE CONTRIBUTIONS

Flutter Responsive Kit, Flutter Package - Self published

Flutter • Dart • Responsive Design • Package Development

Developed and published a **lightweight, extensible Flutter package** to streamline building **responsive UIs** across mobile, tablet, and desktop platforms.

- Introduced reusable utilities like ResponsiveBuilder, ResponsiveText, ResponsiveGrid, and layout helpers for adaptive UI construction.
- Supports **dynamic breakpoints**, clean layout APIs, and seamless integration into **scalable multi-platform apps**.
- Focused on **developer experience**, with intuitive APIs, clear documentation, and consistent updates.
- Designed for flexibility and extensibility, with a roadmap for **custom widget support**, performance enhancements, and community contributions.

Form Engine, Flutter package - Self published

Flutter • Dart • Declarative UI • State Management • Package Development

- Developed and published a **headless, controller-free form engine** designed to manage form state and validation as domain logic rather than widget-bound logic.
- Architected a **UI-agnostic pure Dart core**, enabling developers to write and unit-test complex form behaviors independently of the Flutter framework.
- Implemented **declarative schemas and a fluent validator API**, significantly reducing boilerplate code and manual TextEditingController management.
- Focused on **Clean Architecture** principles, providing a highly extensible and testable solution for enterprise-level Flutter applications.
